How To Consistently Make Over \$1,000 Per Week Trading With the EFC Indicator.

We are Trading Strategy Guides, who are a group of traders that have come together to help every type of trader become consistently profitable trading Forex, Stocks, Options, and Futures.

Whether you have traded for 10 years or are still learning what the term "price action" means, we are here to help you become and stay profitable in your trading habits.

What we decided to do was take one of our most popular and useful strategies that we developed and backtested, and make an indicator that automatically detects reversal patterns based on the powerful strategy.

You will not believe the results we have been getting!

For example at a look at the EFC indicator in action:

When an entry is triggered, it will show you the best place for your stop loss, and take profit. It calculates a 1 risk to 3 reward ratio and places the lines on your chart! The benefit of having a 1 risk to 3 reward ratio is that you only have to win 33% of your trades to be profitable and the EFC Indicator wins much more than that!

This indicator has everything built inside of it so you do not have to lift a finger to figure out where to enter the trade or place your stop loss or where to exit the trade!

It does all of that for you in an instant!

With so many entry opportunities, this indicator will make you a consistent trader. This indicator may give you profitable returns that could potentially give you the desired results you have been looking for.

It's really is like nothing else on the market today...

Discover how to trade Trend Reversals like never before with the EFC Indicator.

As you can see the trades are only triggered when all of the important rules of the strategy are met.

The unique colored candles show you powerful signs of whether the trade is a strong reversal or not.

Another key element to this indicator is the 50 candle price line...

This line alone will take some serious stress away because there will be no need to be counting 50 candles back ever again when you have this indicator...

We know how precious your time is, so why waste it by counting 50 continuous candles back every time you switch your charts.

And this line alone is very powerful...

What goes on the last 50 candles on ANY timeframe is very important information to know because it gives you the current price action.

The automatic price detection makes it easy for you to sit down, look at your charts and see if there is a potential trade or not.

This saves you time which is priceless.

It's that simple!

Just think about how valuable that could be for you.

You could potentially check 30 different charts for potential reversal trades in under 1 minute!

In fact, I tested this and I was able to check 36 different charts/timeframes for potential trade entries in under a minute!

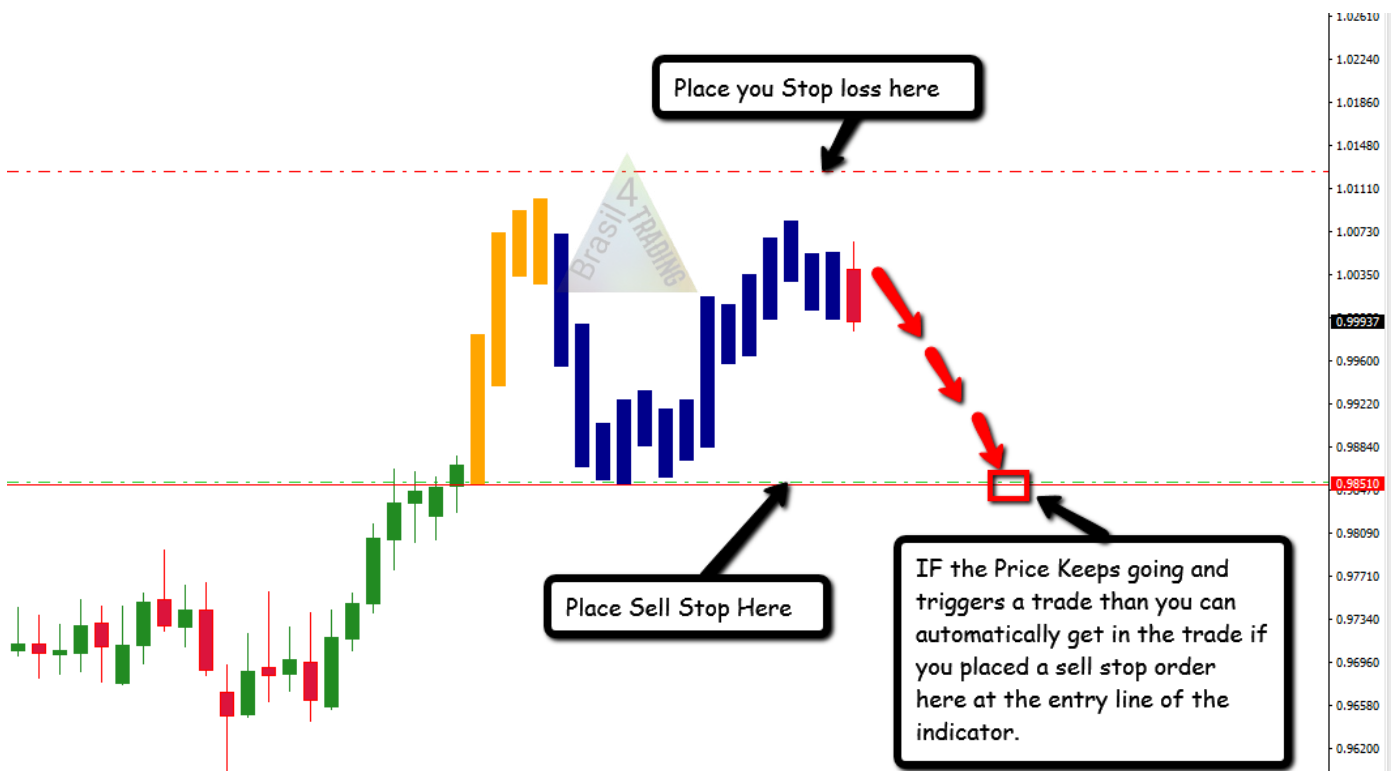

The fact is, your time is extremely valuable makes this a must have for any serious trader.

With this indicator giving you an entry line when the RSI triggers, you can set up entry orders before hand to make sure you get in the trade when the indicator tells you to.

Here is an example of what you can do before the entry line is triggered:

So if the price action continues downward to the entry order, then you could automatically get in this trade when it hits the entry line price that the indicator gives you.

As you can see an early entry order was placed at the entry line that the Indicator shows you. If it's triggered then you will already have your stop loss and 1 risk to 3 reward ratio set.

Just another option if you are short on time and you still want to enter the trade when the indicators tell you to do so.

The EFC Indicator Works Equally as Good for Swing Traders, Day Traders, and Scalpers...

That is because this indicator is designed to work on any timeframe.

For example, check out this swing trading chart on the daily time frame:

So if you would have taken the trade when it triggered, you would be up 316 pips right now.

**Now let's bump down to a lower time frame
(one hour chart) for the day traders:**

You would be up 93 pips right now if you entered the trade where it triggered.

**Here is another trade with the CADJPY currency pair
four-hour time chart:**

And lastly, for all the scalpers, here is a trade on a 15-minute USDJPY time frame:

So that fact is, this will work for any type of trader!

You've just seen how powerful this indicator is when it comes to swing trading, day trading, and scalping. But that's not all.

The EFC Indicator Auto filters out False Patterns so you Get the Best Trade Setups.

Consistency is highly important in trading...

Which is why we made sure that this indicator will trigger only when there is an extremely high chance of a reversal to take place.

We tested this powerful indicator to make sure that we weeded out mostly all of those pesky false patterns so you can have the best trade setups in front of you when the indicator triggers a trade.

The way it does this is, it has built into it a divergence detector which helps you from entering false breakouts.

We also built into this a price alert sensor that triggers when it is currently a high or lows the last 50 candles.

Let me show you a few examples:

Once the *Divergence* detector is signaled by showing you a dark blue candle(s) then if the price action moves according to the rules, the candle will turn dark green and you will have a *BUY* trade activated!

Check out where the trade was triggered Below:

Did We Mention That the EFC Scans 210 active trade set ups right in front of your eyes??

The EFC Scanner equipped with alerts and push notifications to show you trades from a Minute chart all the way up to a daily chart.

This is what the EFC Scanner looks like:

EFC Scanner

Pair	M1	M5	M15	M30	H1	H4	D1	Pair	M1	M5	M15	M30	H1	H4	D1
AUD/CAD	↓	↓			↓			AUD/CHF							
AUD/JPY				↓	↓	↓		AUD/NZD							↑
AUD/USD								CAD/CHF		↓				↓	↑
CAD/JPY	↑	↑	↑		↓			CHF/JPY	↑	↑	↓				↓
EUR/AUD								EUR/CAD	↑					↑	
EUR/CHF				↓		↓	↓	EUR/GBP	↓						
EUR/JPY	↓	↑	↑	↓				EUR/NZD							
EUR/USD		↓	↓	↓				GBP/AUD	↑						
GBP/CAD						↑		GBP/CHF	↑					↓	
GBP/JPY								GBP/NZD	↑						
GBP/USD					↑			NZD/CAD					↓		
NZD/CHF					↓			NZD/JPY		↑			↓	↓	
NZD/USD	↓				↑	↓	↓	USD/CAD	↓					↑	↓
USD/CHF		↓						USD/JPY		↑	↑				
USD/MXN	↑		↓		↓	↑	↑	XAU/USD							

This is how we use the EFC Scanner every day we trade with this indicator.

This is how we use the EFC Scanner every day we trade with this indicator:

As you can see we found three active EFC Trade signals and added the charts to our MT4 to keep an eye on these.

**This took less then 1 minute to set up.
Think about how valuable that is...**

It look less then a minute to find three great reversal trade opportunities.

The EFC Scanner scans thirty pairs for trade setups on 7 different time frames...

That means that you have a potential 210 active trade set ups all on one dashboard.

It would most likely take you 4 hours just to analyze all of those pairs and different time frames, but our scanner will do it for you in an instant!

How to install Indicator for MT4?

Copy Indicator for MT4 to your Metatrader Directory / experts / indicators /

Start or restart your Metatrader 4 Client

Select Chart and Timeframe where you want to test your MT4 indicators

Search "Custom Indicators" in your Navigator mostly left in your Metatrader 4 Client

Right click on 4 Sessions Indicator for MT4

Attach to a chart

Modify settings or press ok

How to remove Indicator for MT4 from your Metatrader Chart?

Select the Chart where is the Indicator running in your Metatrader 4 Client

Right click into the Chart

"Indicators list"

Select the Indicator and delete.
