- o FOR MT4 TERMINAL ONLY
- o PROFESSIONAL CHART BUTTON ENABLING SWITCH BETWEEN PAIRS AND TIME FRAMES
- o BUILT-IN CURRENCY STRENGTH METER THAT HELPS US TO IDENTIFY THE TREND CORRECTLY.

This trading system is a manual trading strategy that you can use to generate profits from the forex market every day. You don't have to be an experienced trader to be able to use it. Even if you have no trading experience at all you would still make a lot of money from it just like pro traders.

You won't have any need to calculate or analyze the forex market again because the indicator will do all of that for you.

How does it work?

Before you start trading open your favorite trading pairs. Choose your timeframe. This trading system works on all time frames from M1 to D1.

The system works on any timeframe from M1 and D1. For scalping functions, use M1 and M5 buying and selling charts. For day trading you can use M15/H1. For swing trading, use H4/D1.

When appearing Green arrow with the Green color line, enter to Buy trade. Exit from the trading with target profit pips. otherwise, exit with the opposite signal. Also, you can use a trailing stop to exit from the trades. Place stop loss for lower low level or nearest support line.

When appearing Red arrow with Red color line, enter to Sell trade. Exit from the trading with target profit pips. otherwise, exit with the opposite signal. Also, you can use a trailing stop to exit from the trades. Place stop loss for a higher high level or nearest resistance line.

Step 1: Identify the trend

Use currency strength indicator to identify the trend, for example, we consider pair ABC/XYZ:

If the currency strength of ABC is above 5.0 OR/AND currency strength of XYZ is smaller than 2.0, so we are in an uptrend.

If the currency strength of ABC is smaller than 2.0 OR/AND currency strength of XYZ is larger than 5.0, so we are in a downtrend.

Step 2: Wait for a buy/sell signal produced by the entry indicator

If we are in the uptrend, so take the BUY signals only.

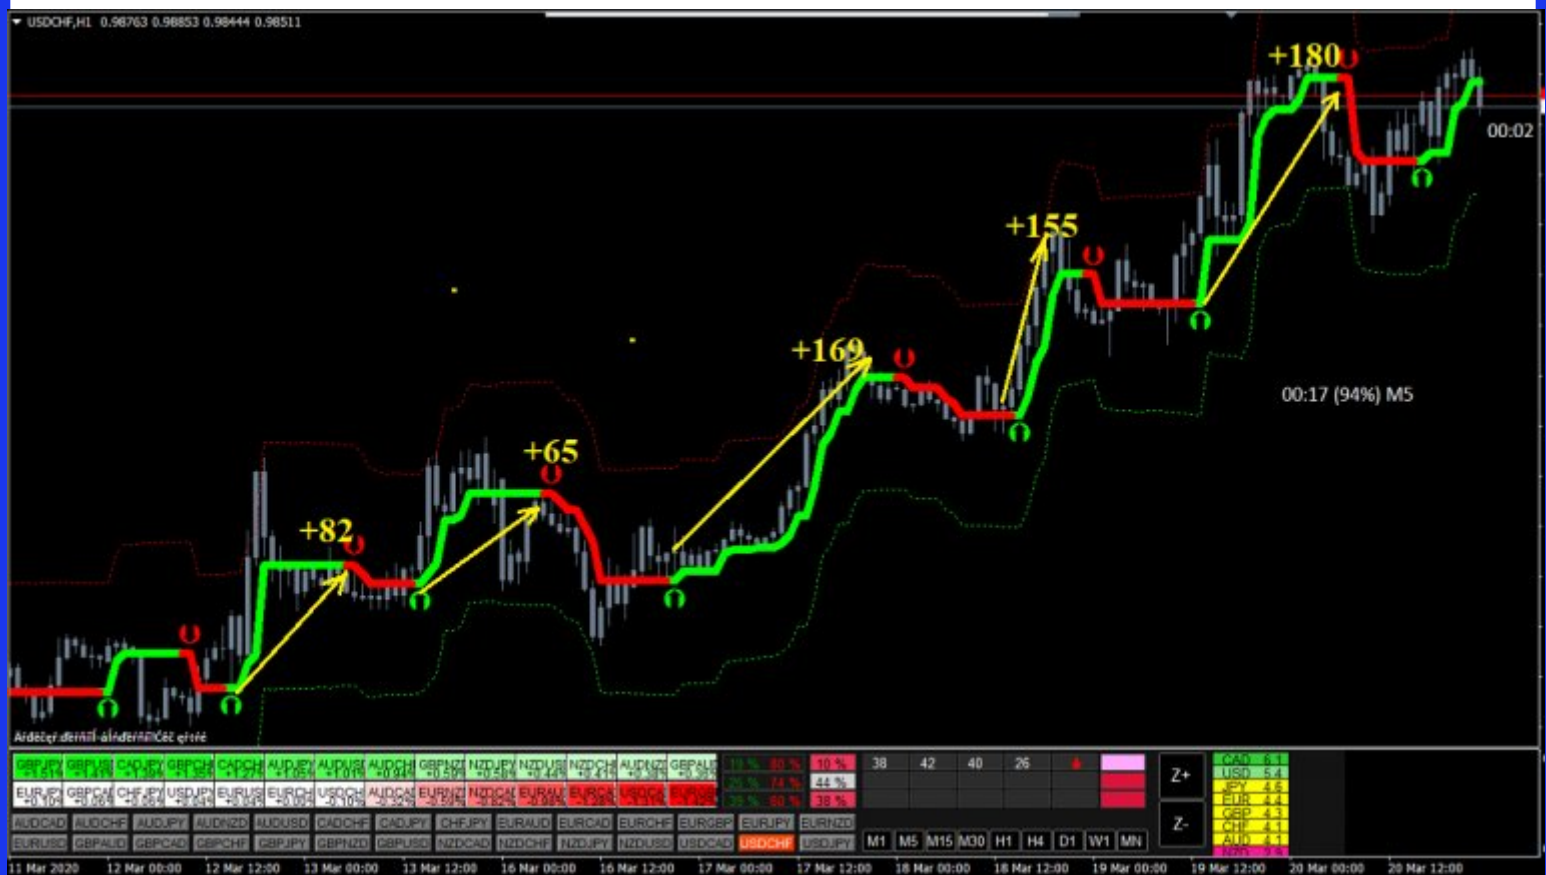

If we are in the downtrend, so take the SELL signals only.

Place stop loss at the last swing high/low.

Step 3: Exit the trade when the opposite signal appears or hit TP levels

How to filter the high probability signals?

- Before trading, always make sure that the market does not expect any important data. If something 'big' appears in the news calendar, it's better to wait for their announcement and later join to further movement.
- Always try to trade on major sessions when the volatility is the greatest. If possible, trade only in London or New York session open.
