Trading fractals Bill Williams system really works – Forex High/Low Fractals with RSI Trend Momentum Trading System.

This is a high profits Trading System using fractals profitably. *The concept of The Forex Fractal is more than just a strategy idea.* The fractal defines an area being watched by large numbers of Big Dog forex traders.

Fractals Indicator

Fractals are indicators on candlestick charts that identify reversal points in the market.

Traders often use fractals to get an idea about the direction in which the price will develop. A fractal will form when a particular price pattern happens on a chart.

The pattern itself comprises five candles and the pattern indicates where the price has struggled to go higher, in which case an up fractal appears or lower, in which case a down fractal appears.

The chart below shows what fractal indicators look like on a chart:

Formation of a Fractal

A “**High Fractal**” formed when a candle has two candles to the right of it with two lower highs and at least two candles to the left of it with two further lower highs.

A “**Low Fractal**” is formed when a candle has two candles to the right with higher lows and two candles to left with two further higher lows.

The following chart shows what this pattern looks like:

High/Low Fractals with RSI Trend Momentum Tradings Rules

Fractal indicators can be used to determine the market direction. Traders can use fractal indicators to determine the possible direction of price in a market.
