Slow Stop and Reverse

Find the trend and the new

Submit by Janus Trader

Big Arrow is an trading system inspired by (my strategy Projections Future and Gain Forex) but there are the differences. We try to enter more into trends and important reversals. The entry arrow is slower because the goal is to enter the movement. The use of TMA bands in this system is as dynamic supports and resistances, price targets and entry limits. Unlike the previous systems, this is also suitable for day trading time frames 15 and 30 min. The two zigzags that I use are very slow.

Time Frame 15 min, 30 min, 60 min, 240 min, daily.

Currency pairs: major, minor, Commodities and Indices.

Sell

Trading Lab Trends red squares the same time frame and the next.

Yellow square with black arrow inside near or outside the upper TMA bands.

Entry Exit Trend white arrow.

Re-entry in the direction of the trend but previous of the opposite dot line of TMA Bands.

Exit position

Initial stop loss below/above the previous swing high/low.

Profit target at the levels of price grid line with minimum ratio 1:13.

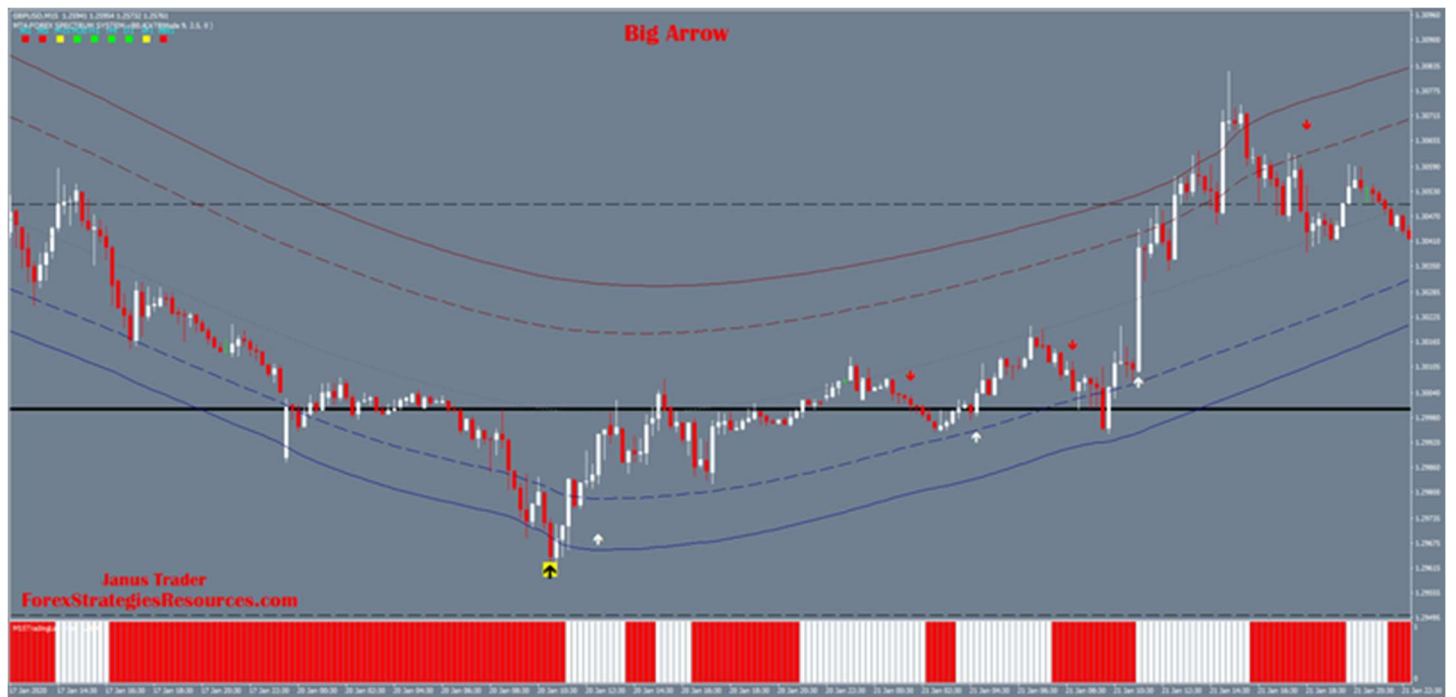

it is advisable to manage the position with pyramidal or horizontal anti-martingale (scalar volumes or with entry levels with equal volumes).

If you follow the three rules, this is likely to be a winning system. Even more successful if you learn to use pyramid trading management.

Happy trading.

P.S. Who uses this trading system and will win I hope he makes a donation to the web site.
