

# Prediction Future stable version

Stable version based on indicators that do not recalculate. I made this version because it was requested by many to the admin of the site also the main request was to have a stable version at the time frame H1.

I think it's a psychological issue. The other versions are also good. Here I added in addition to the space areas of oversold and over-bought especially for trading at H1.

Time frame H1 and H4.

Currencies Majors, Minor and Commodities.

Metatrader Indicators

Bollinger Bands Stop (18, 2).

Brain trend stop.

Level ZZ semaphor.

Zig Zag (60.5.5).

WP Nostromo pivot levels (oversold inferior 61% - hypercomprasto over 61%).

Kalman filter (K 3.1).

Fuure prediction.

Sef 05

**Trading rules future projections stable version.**

**Buy**

1 Zig Zag Buy arrow in the red square.

2 Brain trend below the candle of price.

3 Bollinger Band blue dot.

4 Future prediction points upwards > of zero.

5 SEF 05 blue bar

6 Kalman filter green bar. (Optional)

7 The best trading opportunities occur in the oversold areas of the Nostromo pivot levels

## **Sell**

1 Zig Zag sell arrow in the red square.

2 Brain trend above the candle of price.

3 Bollinger Band red dot.

4 Future prediction points down < of zero.

5 SEF 05 red bar

6 Kalman filter red bar. (Optional)

7 The best trading opportunities occur in areas of overbought of Nostromo pivot levels.

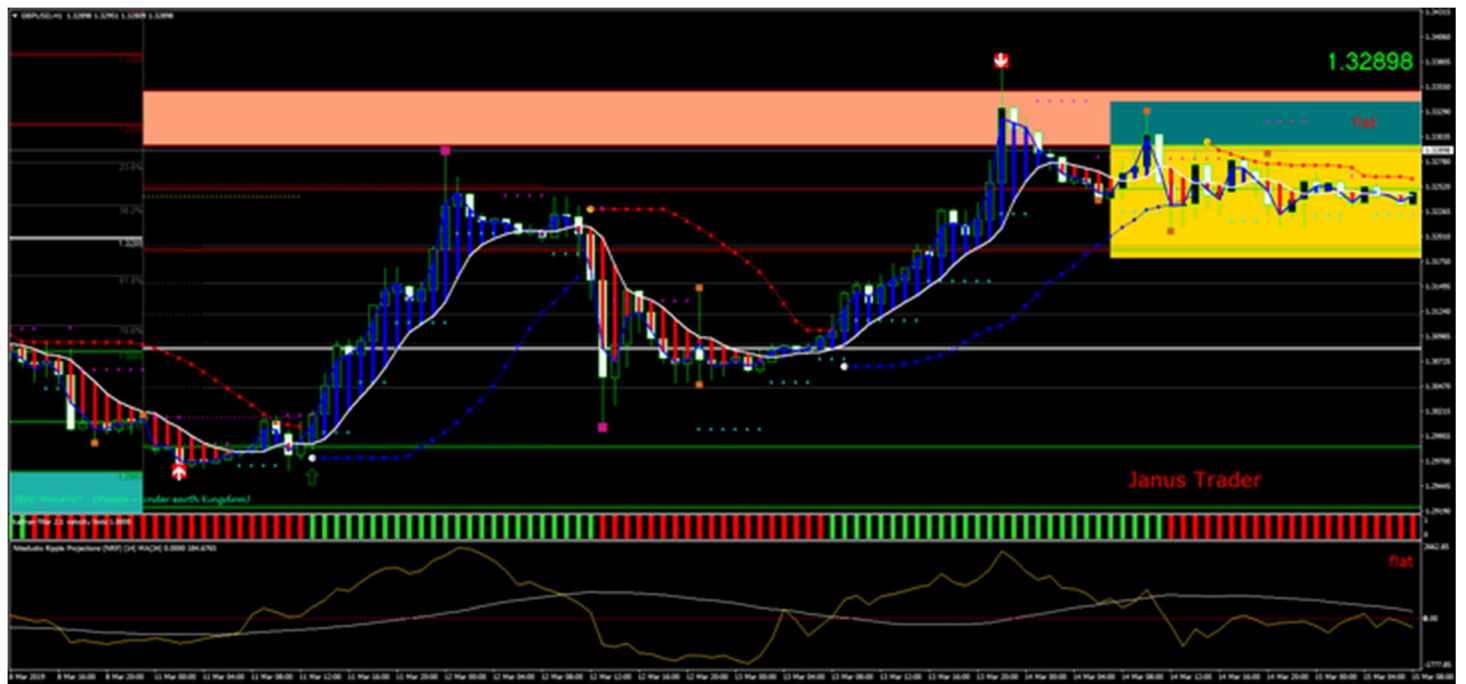

Being a highly profitable strategy with clear price targets, I recommend an anti martingale pyramid money management.

I thank everyone for their support and constructive criticism in particular for joy22, Maximo trader and Admin of Forex Strategies Resources.

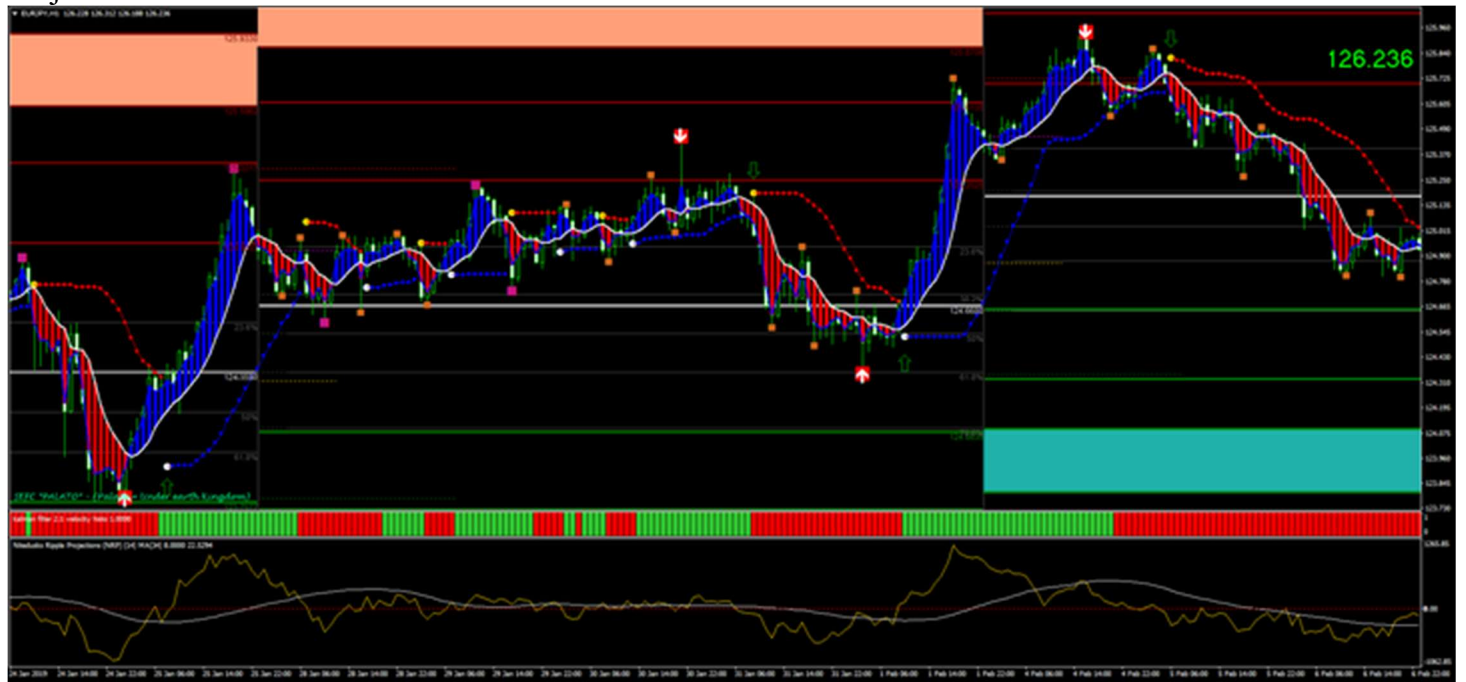

**This version is important because it breaks down the psychological wall that not everyone can overcome or that of the indicators that recalculate.** for me it's normal but it's not for everyone like that.

With these latest modifications, a profitable and free high quality strategy has been achieved.

This is a winning strategy.
