## DS Bressert Trading MT5

Submit by Dimitri

Reversal Trend Arrow MT5 is a trend reversal strategy based on arrow reversal filtered by bands and optionally also by the Stochastic DSS Bressert.

The strategy is based on the overbought and oversold principle. When the price goes out of the bands wait for an arrow to form in the opposite direction to enter the market, or wait for the stochastic to line up, that is, to concede with the arrow.

Reversal Trend Arrow MT5
