

827# TMA Centered End Point

Trend Navigator indicator MT4

Trend Action Strategy

Submit by Maximo Trader

TMA Centered End Point is a TMA that not recalculates and in this case it is used as a trend arrow filter. Arrow momentum, breakout or reversal can also be used. In this case it is possible to appreciate the ability to filter the signals of the triangular moving average. In this case it has a standard setting but can be calibrated for any time frame and currency cup. This template is just an input but it still seems to give positive results. Also I have added an optional momentum filter.

Time Frame 5 min or higher.

The entry timing arrow setting is slow.

Currency pairs: any.
